Effects of Gravitational Waves

Effects of Gravitational Waves

BUT THERE'S ONE RULER THAT DOESN'T GET STRETCHED, ONE MADE USING THE SPEED OF LIGHT:

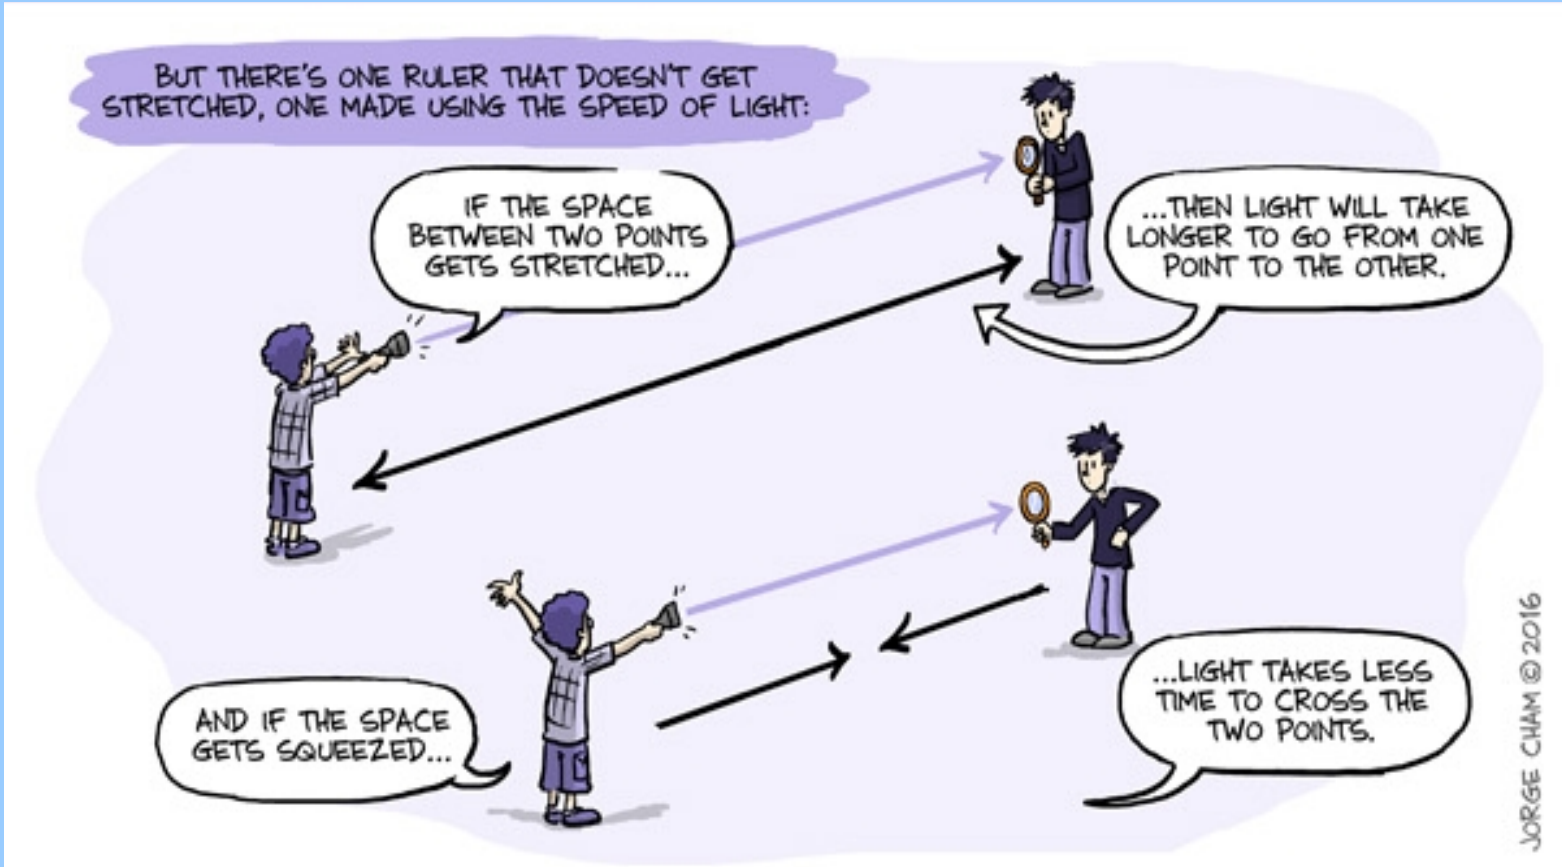

IF THE SPACE BETWEEN TWO POINTS GETS STRETCHED...

...THEN LIGHT WILL TAKE LONGER TO GO FROM ONE POINT TO THE OTHER.

AND IF THE SPACE GETS SQUEEZED...

...LIGHT TAKES LESS TIME TO CROSS THE TWO POINTS.

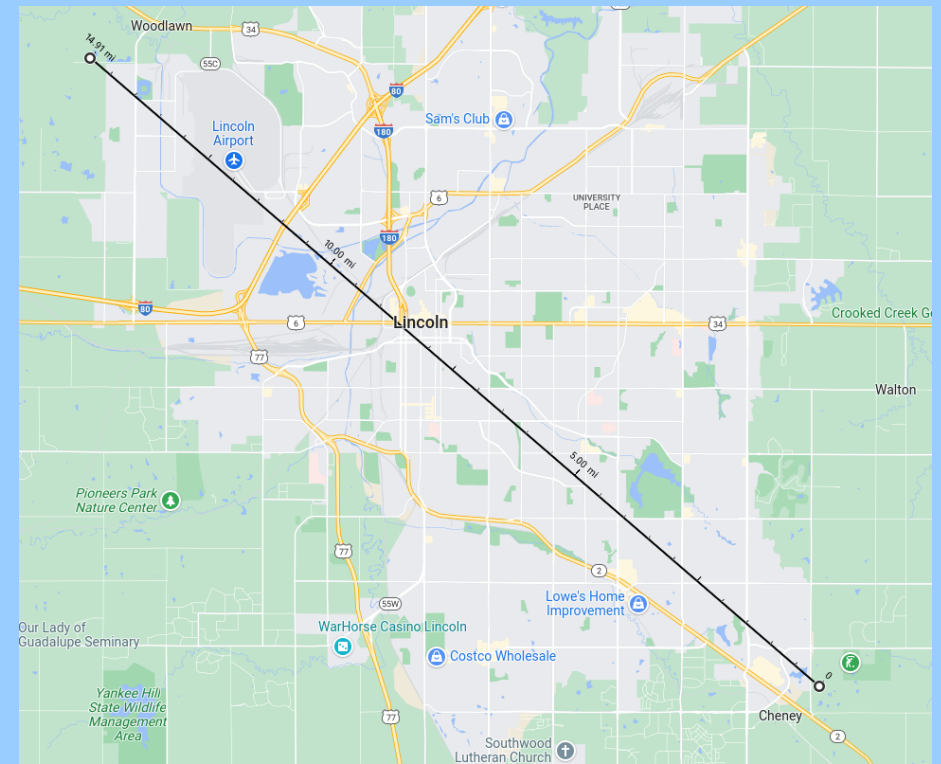

JORGE CHAM © 2016

Neutron Stars

$M \sim 1-2 M_{\odot}$, $R \sim 12 \text{ km}$

Measuring Pulses

Pulsars as Precise Clocks: J1909-3744

On February 18, 2011 at 00:00:00 UTC:

$$P = 2.947108024810317 \pm 0.000000000000000009 \text{ ms}$$

Pulsars as Precise Clocks: J1909-3744

On February 18, 2011 at 00:00:00 UTC:

$$P = 2.947108024810317 \pm 0.000000000000000009 \text{ ms}$$

The last digit changes by 1 every 71 seconds

Pulsars as Precise Clocks: J1909-3744

On February 18, 2011 at 00:00:00 UTC:

$$P = 2.947108024810317 \pm 0.00000000000000009 \text{ ms}$$

The last digit changes by 1 every 71 seconds

This digit changes by 1 every 226 years

Pulsars as Precise Clocks: J1909-3744

On February 18, 2011 at 00:00:00 UTC:

$$P = 2.947108024810317 \pm 0.00000000000000009 \text{ ms}$$

The last digit changes by 1 every 71 seconds

This digit changes by 1 every 226 years

From February 18, 2011 at 00:00:00 UTC to the start of this talk (October 22, 2022 at 00:30:00 UTC), the pulsar has completed just over 125,007,769,167 rotations (and a half!)

More fun with J1909-3744

Smallest eccentricity of any known binary in the
Universe:

$$e = 0.000000110 \pm 0.000000009$$

The orbit has a radius= $(5.7018 \pm 0.0004) \cdot 10^8$ m (0.82
 R_{Sun})

But, we know the difference between the
semi-major and semi-minor axis is $3.5 \pm 0.5 \mu\text{m}$!

The Tiny Effects of GWs

$L \sim cT \sim 10$ lightyears ($= 3$ pc $= 10^{17}$ m)

$h \sim 10^{-16} - 10^{-14}$ (for our sources)

$\Delta L \sim hL \sim 10$ -1000 m $\rightarrow \Delta t = \Delta L/c \sim hT \sim 30$ -3000 ns

0.001 – 0.1 R_{NS}

Gravitational Wave Sources

Galaxy Merger

NGC 5331

Dynamical friction drives massive objects to central positions

Stellar Core Merger

NGC 17

Dynamical friction less efficient as SMBHs form a binary.

Binary Formation

Stellar and gas interactions may dominate binary inspiral?

Continuous GWs

Gravitational radiation provides efficient inspiral. Circumbinary disk may track shrinking orbit.

Coalescence, Memory & Recoil

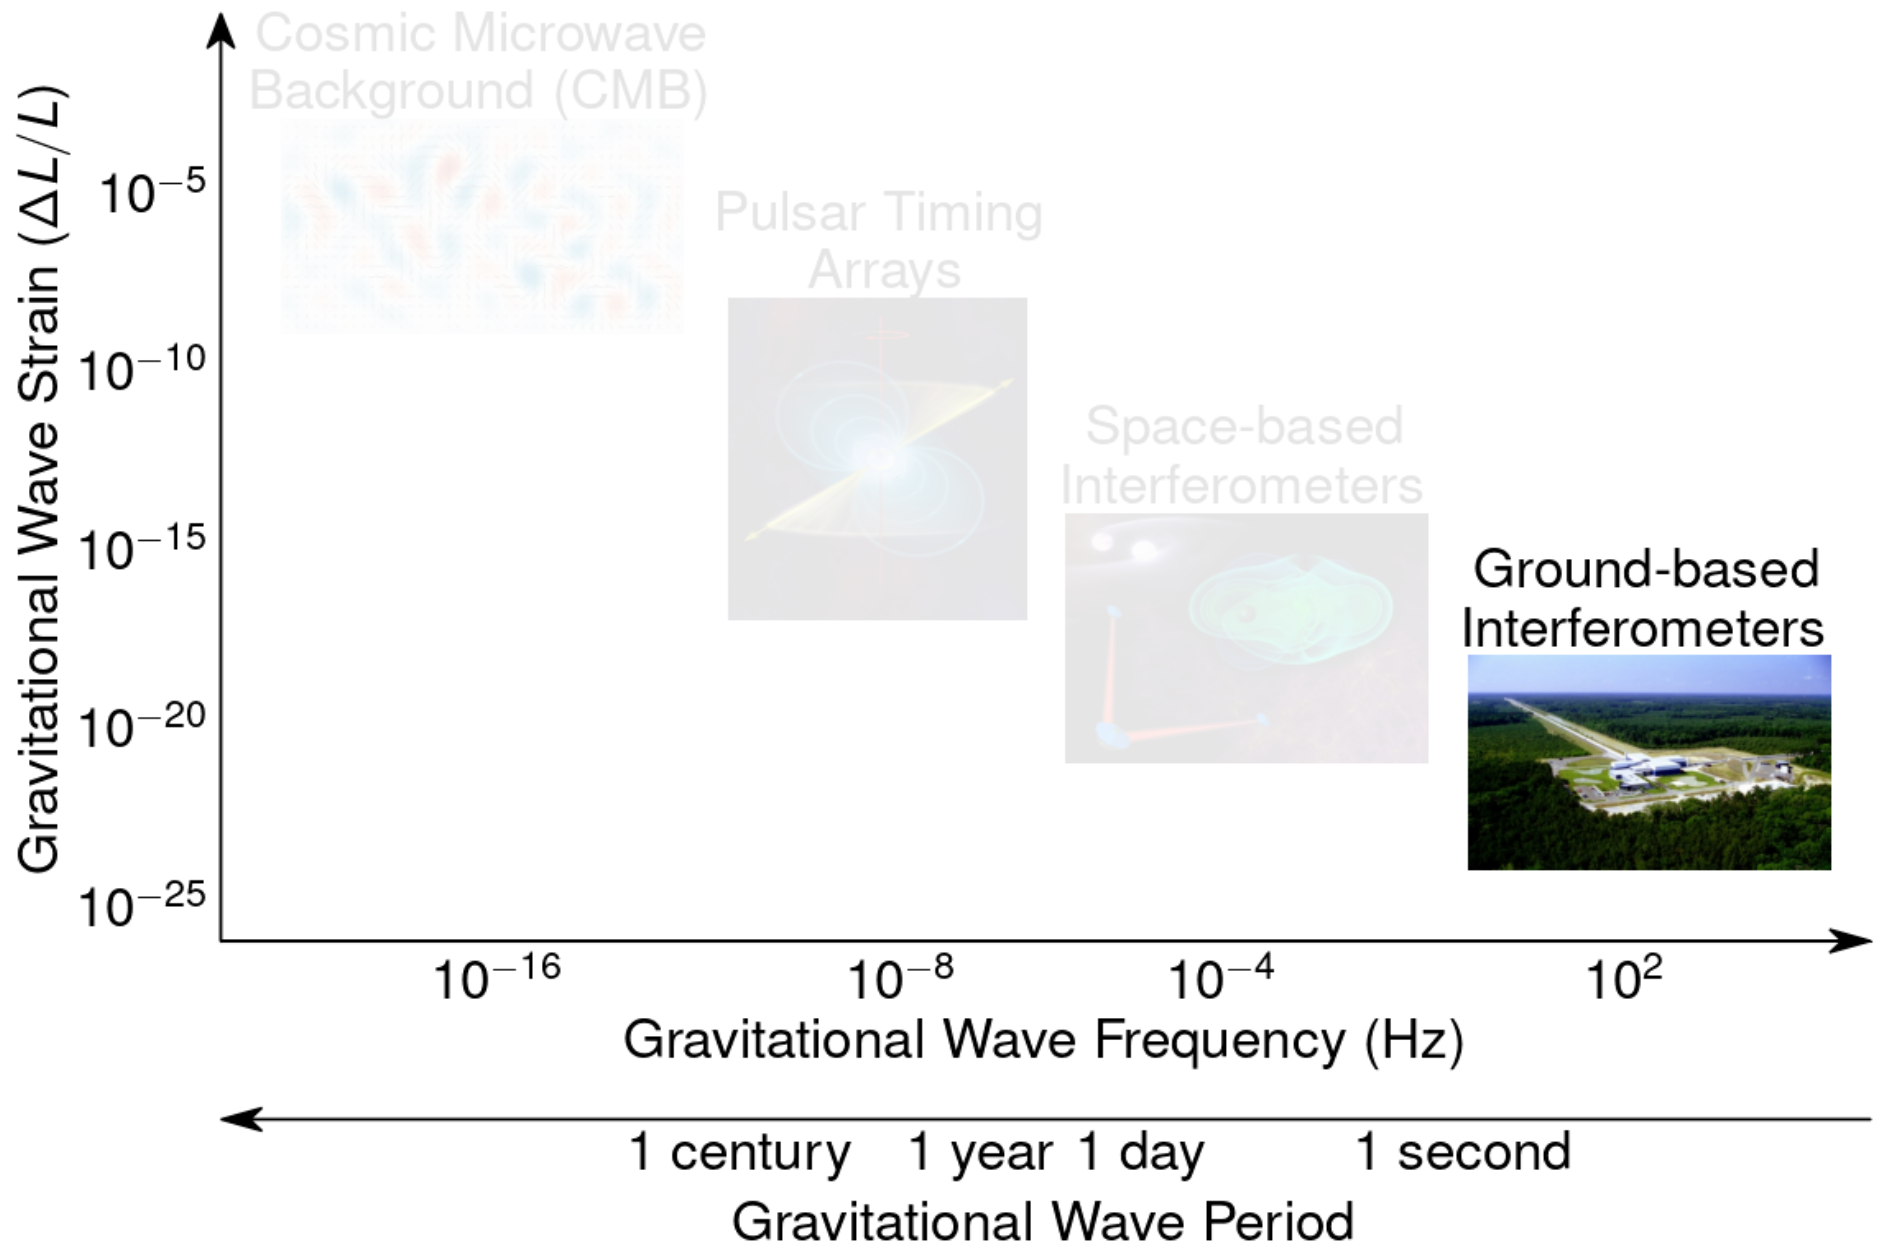

Post-coalescence system may experience gravitational recoil.
